

Jira Software Integration

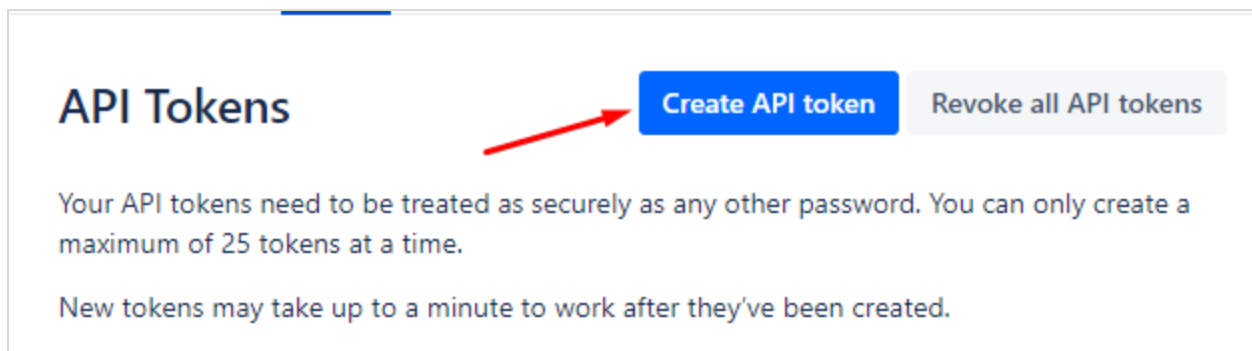

Jira Software is a powerful platform. It combines issue collection and agile project management in one application. Jira Software helps you plan and organize tasks, workflows and reports for your agile team more efficiently.

Authentication

1. In the plugin, open the login window. Then click **Create Token**.

2. Your Jira account page opens. Click **Create API token**.

3. Enter a name for the token, then click **Create**.

Create an API token

Choose a label that is short, memorable, and easy for you to remember.

Label *

YourTokenName

By creating an API token, you agree to the [Atlassian Developer Terms](#) and acknowledge the [Privacy Policy](#).

CancelCreate

4. Copy the token to the clipboard.

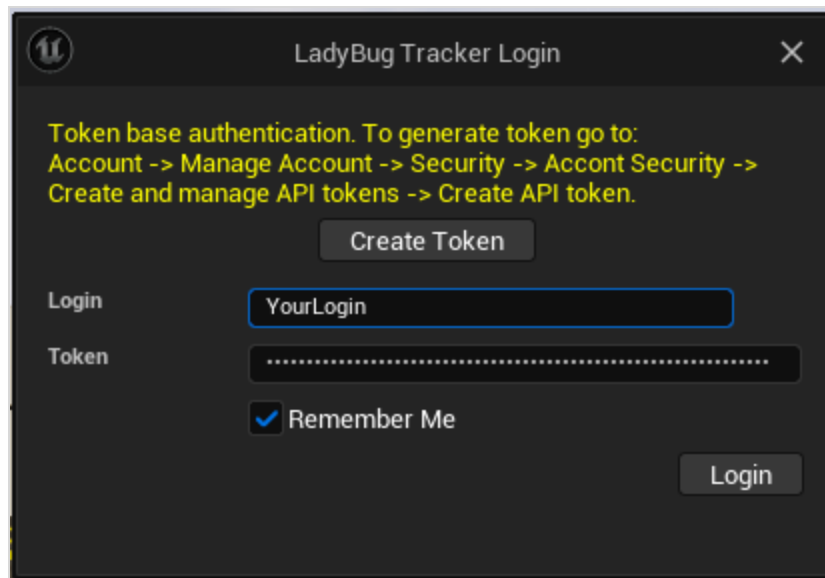

Your new API token

Make sure you copy your new API token. You won't be able to see this token again.

.....

CloseCopy

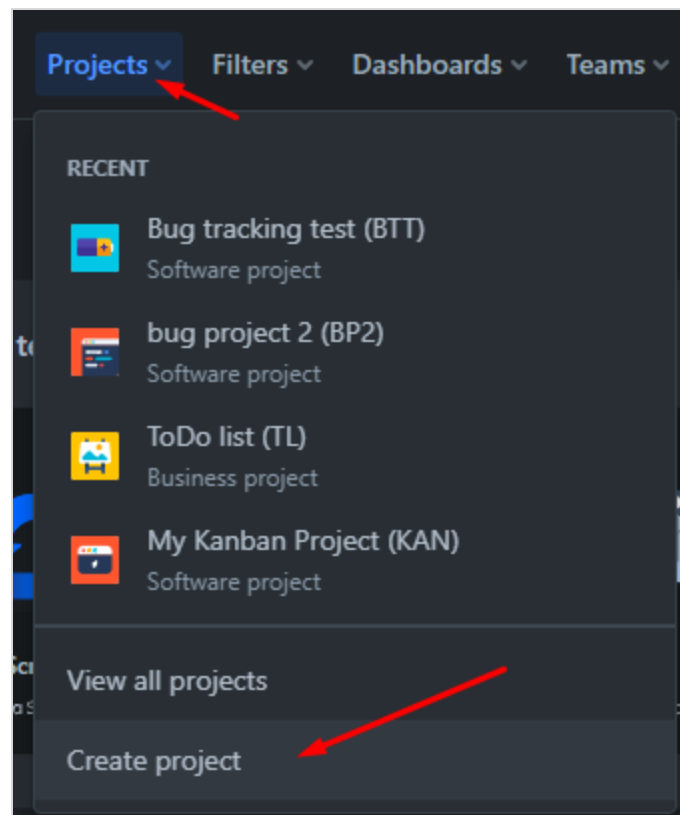

5. Enter your login, then paste the token from the clipboard. Click **Login**.

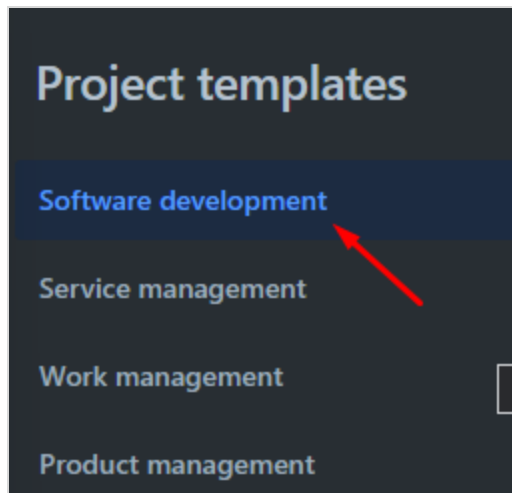

Setup project

The easiest method to set up a project is to use the **Bug tracking** template.

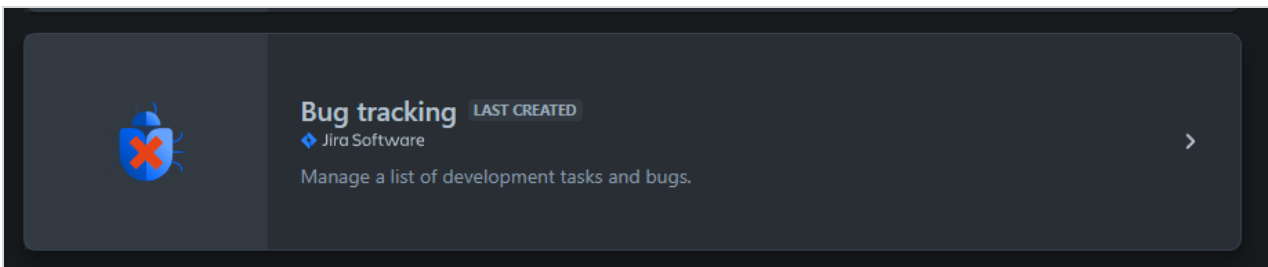

1. Click **Projects**, then click **Create project**.

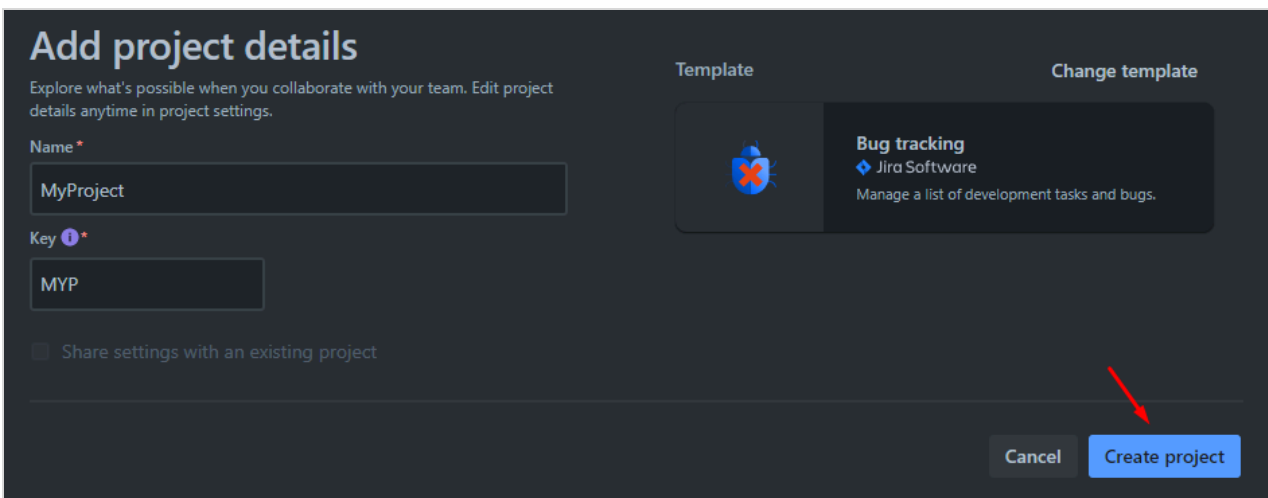

2. Select the **Software development** category.

3. Select the **Bug tracking** template.

4. Enter a project name and a key, then click **Create project**.

5. Add two custom fields to the project, with the names **Camera** and **Level**. Both fields must have the type **Short text**. In Jira, it is not easy to add new custom fields. To learn how, read the Jira documentation. You must add these fields to use all the features of the plugin.
