Enable SOAP API on the server if is not activated

Project setup

Mantis Bug Tracker

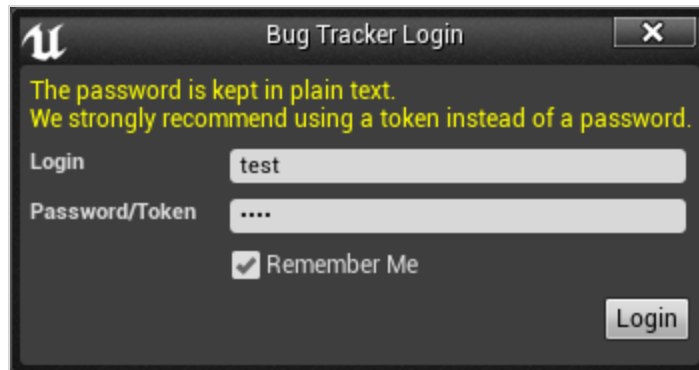

“MantisBT makes collaboration with team members & clients easy, fast, and professional

MantisBT is an open-source issue tracker that provides a delicate balance between simplicity and power. Users are able to get started in minutes and start managing their projects while collaborating with their teammates and clients effectively. Once you start using it, you will never go back!”

MantisHub

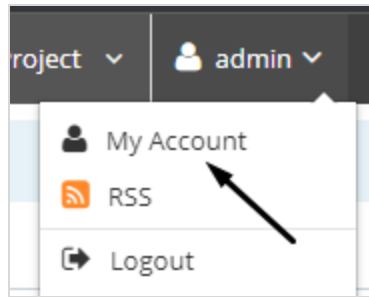

“Track your issues with our simple, intuitive interface. Split your issues into categories and move them through your issues life-cycle. Search them, auto-assign them to your developers, attach files, tag them, ping your teammates and customize your system. All this and more with the well-known Mantis brand”

Authentication

A screenshot of a 'Bug Tracker Login' dialog box. The dialog has a dark background and a title bar with a close button. Inside, there is a yellow warning message: 'The password is kept in plain text. We strongly recommend using a token instead of a password.' Below this, there are two input fields: 'Login' with the text 'test' and 'Password/Token' with masked characters '....'. There is a checked checkbox labeled 'Remember Me' and a 'Login' button at the bottom right.

A token is always better than a password. To make a token, do these steps:

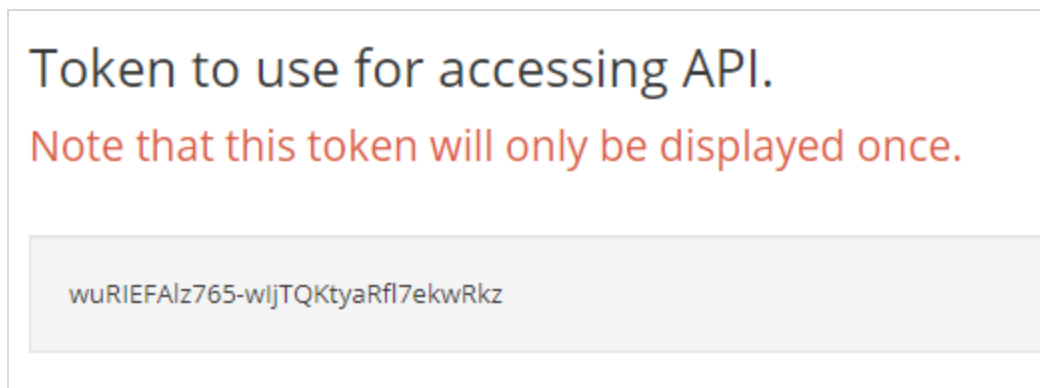

1. Open the **My Account** page.

2. Open the **API Tokens** tab, then click **Create API Token**.

A screenshot of the 'API Tokens' tab in the application. At the top, there are several tabs: 'My Account', 'Preferences', 'Manage Columns', 'Profiles', and 'API Tokens'. Below the tabs, there is a blue header with a plus icon and the text '+ Create API Token'. Underneath, there is a form with a label 'Token Name' and an empty text input field. At the bottom left of the form, there is a button labeled 'Create API Token'.

3. Use the token to log in.

Server Setup

Enable SOAP API on the server if is not activated

https://mantisbt.org/docs/master-1.3.x/en-US/Admin_Guide/html/admin.config.soap.html

Project setup

LadyBug Tracker needs two custom fields: **Camera** and **Level**. To learn how to add custom fields, read [this page](#).
