YouTrack

“A project management tool that can be adapted to your processes to help you deliver great products. Track projects and tasks, use agile boards, plan sprints and releases, keep a knowledge base, work with reports and dashboards, and create workflows that follow your business processes. Never force your process to fit the limits of a tool again. Unlike other project management tools, YouTrack can be customized to your needs!”

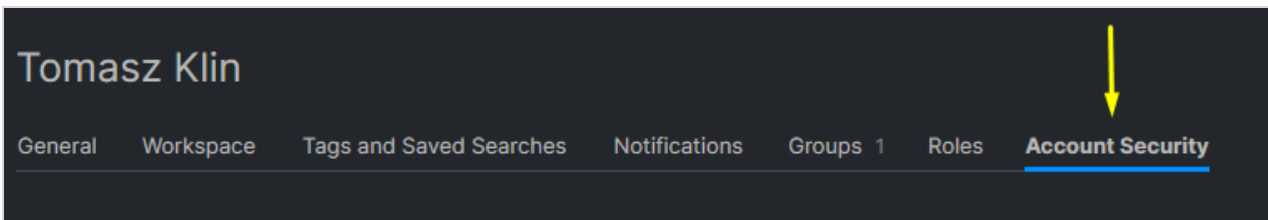

Authentication

To log in from the plugin, you must first make a token. To make a token, do these steps:

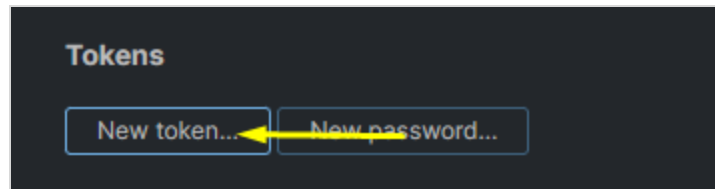

1. Open your user profile.

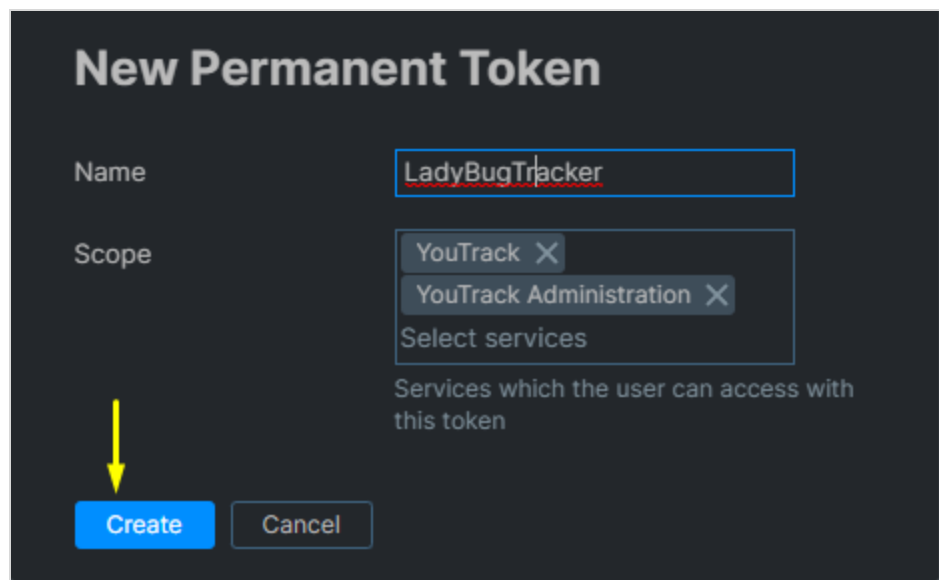

2. Open the **Account Security** tab.

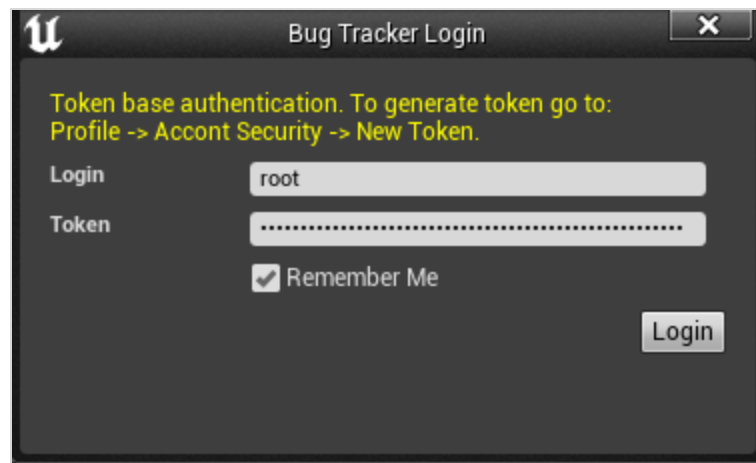

3. Click **New token...**

4. Enter any name, then click **Create**.

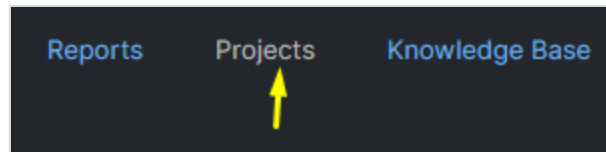

5. In the login window, use your user name and the token to log in.

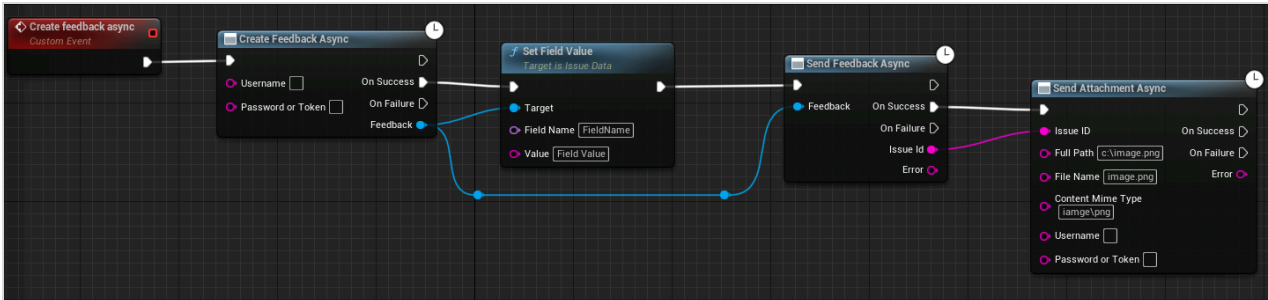

Project setup

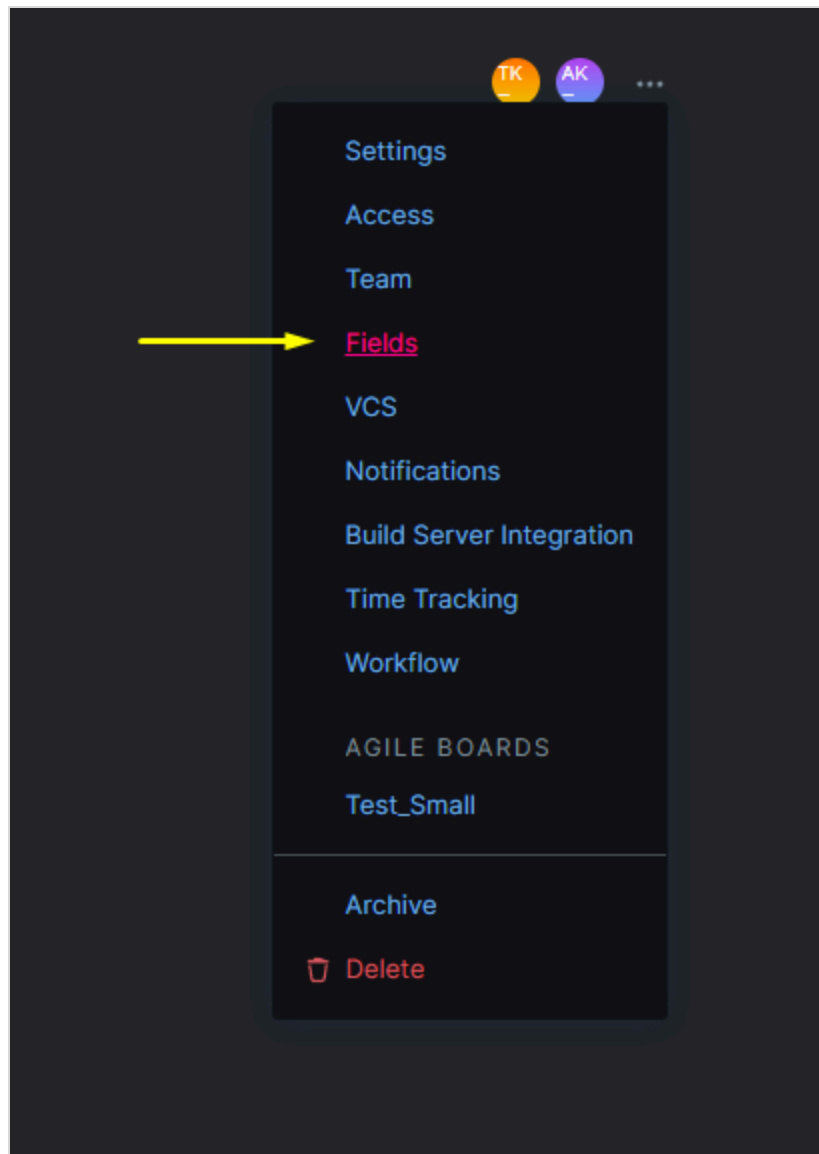

1. Open the **Projects** tab.

2. Make a new project, or select a project that you already have.

3. Open the **Fields** section.

4. Add the **Camera** and **Level** fields.

Create new

Use existing

Field Name

Camera

Field name shouldn't contain any of following characters: <, /, >, :

Type

string

Aliases

Comma-separated list of aliases to use in search queries and commands

☒ Can be empty

Empty value

Level

Field name shouldn't contain any of following characters: <, /, >, :

Type

string

Aliases

Comma-separated list of aliases to use in search queries and commands

☒ Can be empty

Empty value

Downloading only part of the project

By default, the plugin downloads all the issues in the project. To download fewer issues, use **Project Settings > Plugins > LadyBug Tracker > YouTrack Settings > Issue Query Filter**. The plugin adds the text of this setting to the `project:{ProjectName}` query that it sends. Write the filter in the YouTrack search syntax.

These are some frequent filters:

Filter	What the plugin downloads
#Unresolved	Only open issues
Type: Bug	Bugs, but not features or tasks
Assignee: me	Issues that are assigned to you
created: {This week}	Issues that were reported this week

To download all the issues, keep the field empty. The plugin applies the filter when it downloads the issues. Thus, after you change the filter, download the issues again to see the result.

Subtasks

If the project has a subtask link type, an issue has a **Subtask of** field. This field shows a list of the issues that can be its parent. To put the bug under one of these issues, select that issue. To keep the bug independent, keep **No parent** in the field. You can change the field later. The issue then moves under the new parent.

The plugin shows the field only when the YouTrack project has a subtask link type. In a project without this link type, you cannot put a bug under a parent. Thus the plugin does not show the field.
