Introduction

The Ultimate To-Do List plugin for Unreal Engine is an efficient tool to manage tasks. It lets you make, view and edit tasks directly in the editor. The plugin has Sticky Notes, which show tasks on a level. It also has a "Go to" button that gives you quick access to the location of a task.

The plugin also has powerful options to sort and filter tasks, and you can capture and edit screenshots. You can also add comments, and use a draft mode to complete the details of a new task before you submit it.

Your tasks stay in the service that your team already uses. Ultimate To-Do List works with these services, and each of them has a free plan:

- Trello
- YouTrack
- Jira Software
- Asana
- HacknPlan
- ClickUp
- Notion

The comparison below shows what each service gives you (see [Integrations comparison](#)). Whichever service you select, the plugin keeps nothing of its own. The tasks are in that service. Thus the other members of your team can continue to work with them in a browser or in a mobile app. They see the changes that you make in the editor.

Features list

- Make new tasks in the editor and in the game.
- Sticky Notes. Show tasks on a level.
- "Go to" button. With one click, open the level that is related to the task location.
- Edit the details of a task in place. The plugin saves all changes automatically.
- Filter tasks.
- Sort tasks by column.
- Capture screenshots.
- Edit screenshots.
- Add comments.
- Draft mode. Complete the details of a new task before you submit it.

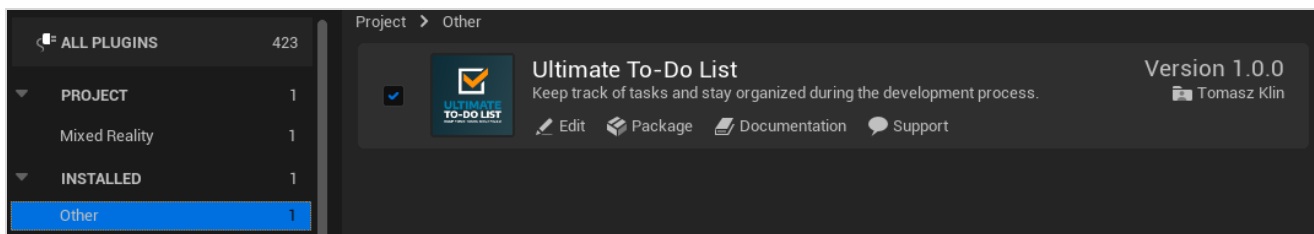

- Integration with Trello, YouTrack, Jira Software, Asana, HacknPlan, ClickUp and Notion.
- Work together with the members of your team.

Getting Started

Enabling Plugin

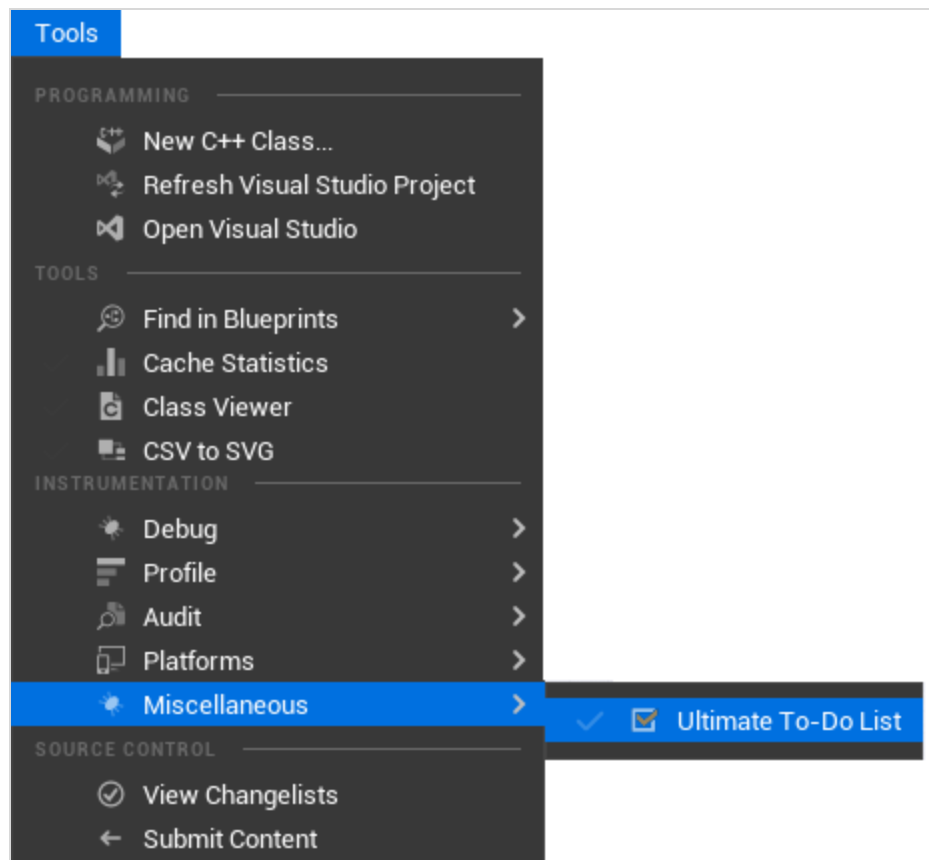

To enable the plugin, do these steps:

1. Go to Edit -> Plugins.
2. Select the **Other** category.
3. For Ultimate To-Do List, select **Enabled**.

Opening Tool Window

Ultimate To-Do List is available as a tab in Unreal Editor. You can open the tab from the Window menu.

Supported Integrations

Ultimate To-Do List supports many services.

Trello

- **Integration Documentation**
- <https://trello.com/>
- Free for a maximum of 15 users
- Very popular software in game development

YouTrack

- **Integration Documentation**
- <https://www.jetbrains.com/youtrack/>
- Free for a maximum of 10 users
- Project management tool

Jira Software

- **Integration Documentation**
- <https://www.atlassian.com/software/jira>
- Free for a maximum of 10 users
- Project management tool

Asana

- **Integration Documentation**
- <https://asana.com>
- Free for a maximum of 10 users
- Project management tool

HacknPlan

- **Integration Documentation**
- <https://hacknplan.com/>
- Unlimited users

ClickUp

- **Integration Documentation**
- <https://clickup.com/>
- Has a free plan
- Project management tool. On a free plan, the plugin keeps the Level and Camera values in the task description, not in custom fields.

Notion

- **Integration Documentation**
- <https://www.notion.so/>
- Has a free plan
- Workspace and documentation tool.

¹ Available in the paid version of the service.

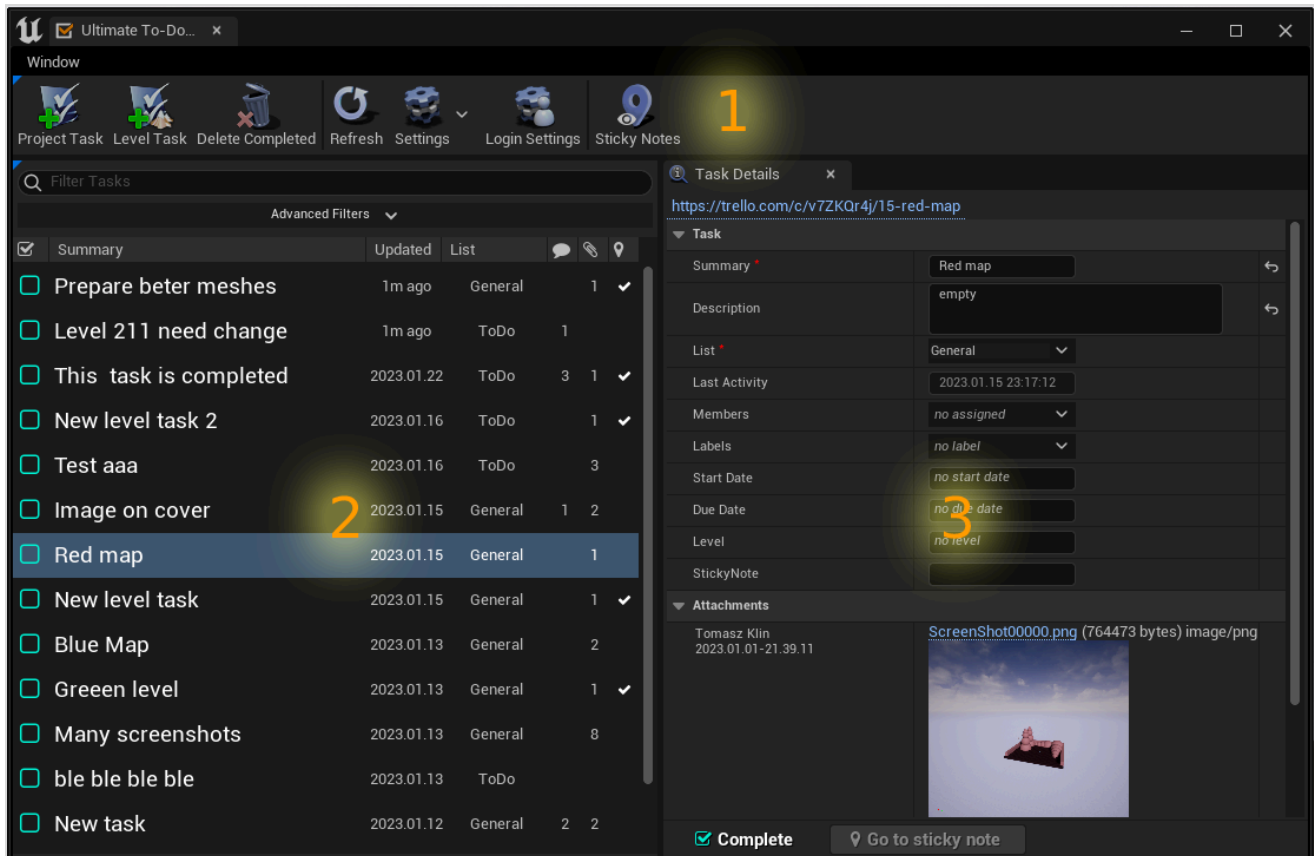

² The service does not have this feature.

³ The plugin does not have this feature yet.

⁴ When a workspace has more than one member, Notion sets a limit of 1,000 blocks.

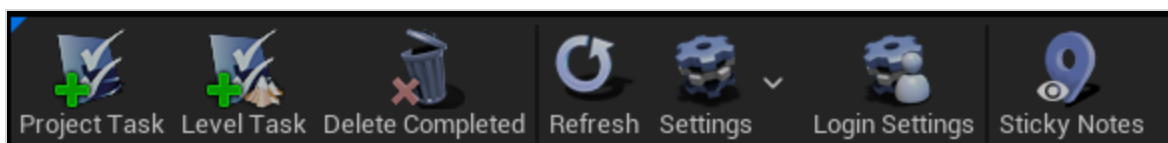

Interface

The user interface of Ultimate To-Do List has these components:

1. Toolbar
2. Tasks List
3. Task Details
4. Output

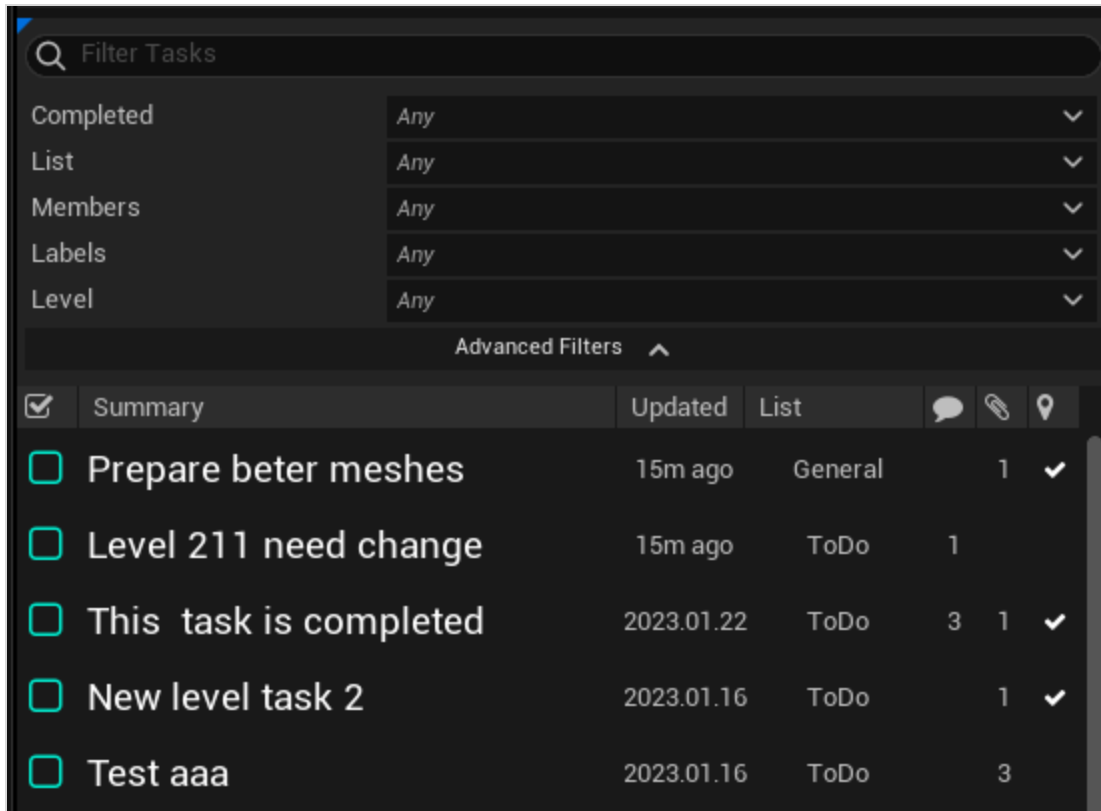

Toolbar

1. Project Task - Makes a new task.
2. Level Task - Makes a new task with a sticky note on the level.

3. Delete Completed - Deletes all completed tasks.
4. Refresh - Initializes the connection to the server again and refreshes the Tasks List.
5. Settings - Opens the [Plugin Settings](#) window.
6. Login Settings - Opens the [Login window](#).
7. Sticky Notes - Shows or hides the sticky notes in the level viewport (see [Sticky Notes](#)).

Tasks List

When the plugin has downloaded all the tasks from the server, the Tasks List shows them. To see only the tasks that interest you, filter the tasks. The filter of the Tasks List uses an advanced search syntax, similar to the syntax of the Content Browser. With this syntax, you can write complex search queries. You can also find tasks by the key-value pairs of their properties. For more information, see the [Advanced Search Syntax](#) page.

Examples:

Filter Phrase	Description
hello	tasks that contain the word 'hello' in the summary, description or additional information fields
...llo	tasks with a summary, description or additional information that ends with 'llo'
updated >= 2017	updated in 2017 or later
updated = 201712	updated in December of 2017
updated = 20171224	updated on 24 December of 2017
updated < 20171224.13	updated before 1 pm on 24 December of 2017
status != resolved	all tasks that are not resolved
severity > minor	severity greater than minor
assignedto = john_smith	assigned to john smith
submitted = 2018 & status = new	new tasks submitted in 2018

Task Details

The Task Details panel shows all the information about the selected task.

Task Details

☒ Complete

 Go to sticky note

1. A link that opens the selected task in the web browser
2. Property list (see [Property List](#))
3. Toolbar

Property List

The Property List has all the most important information about the selected task.

General

The standard properties are available by default in Mantis.

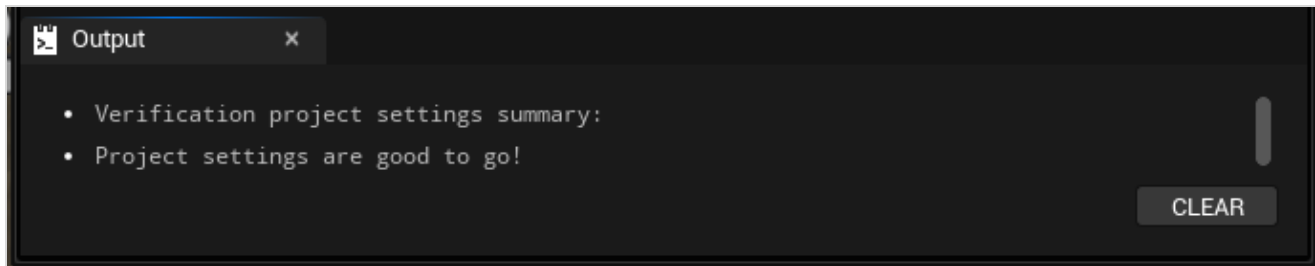

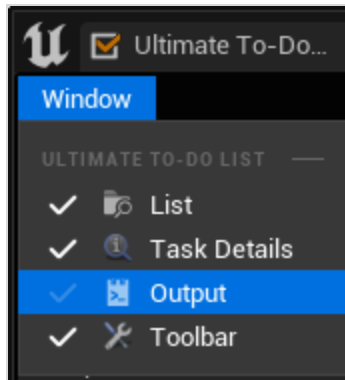

Task	
Summary *	1. Mark a Task as Complete
Description	Check the checkbox to the left of the task summary to mark it as complete.
List *	General
Last Activity	2023.02.10 23:50:53
Members	no assigned
Labels	no label
Start Date	no start date
Due Date	no due date
Level	no level
StickyNote	

Attachments

The Attachments section shows a list of attachments. For images in PNG, BMP and JPG format, the plugin can show thumbnails.

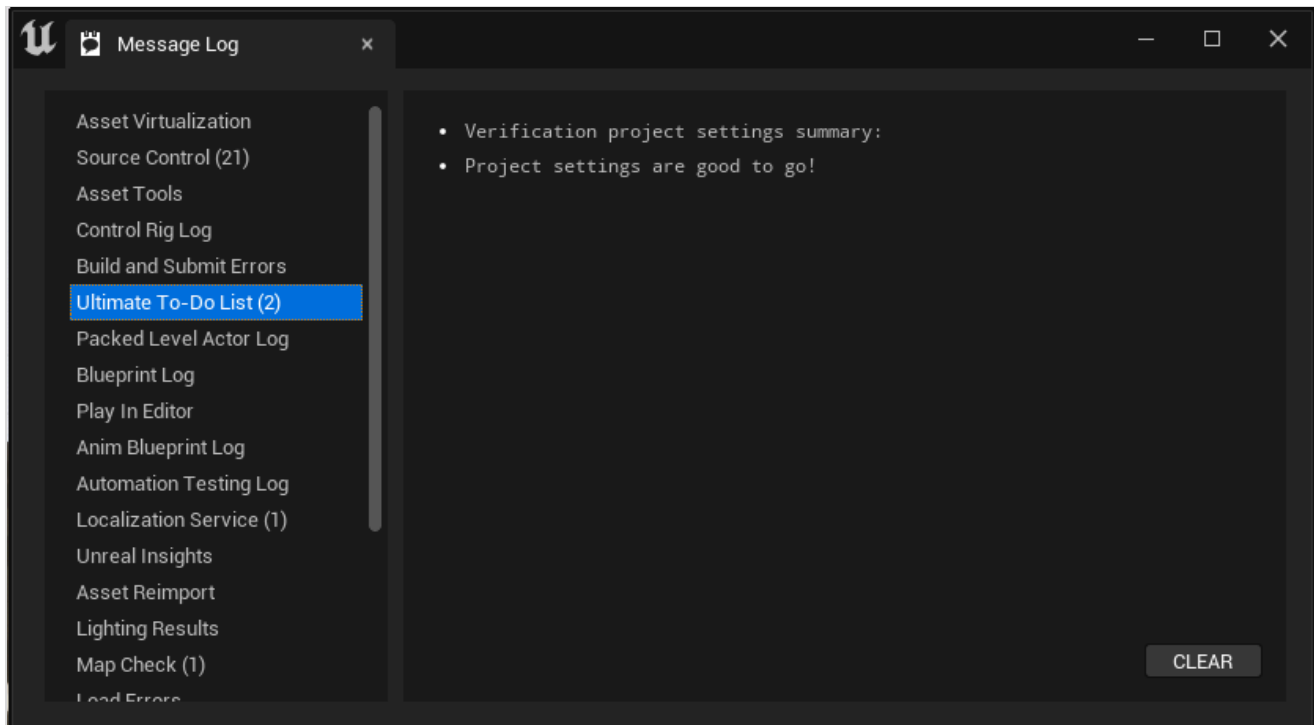

Output

The Output panel collects the log output of the plugin operations in one place. If a problem occurs, look here first for the cause.

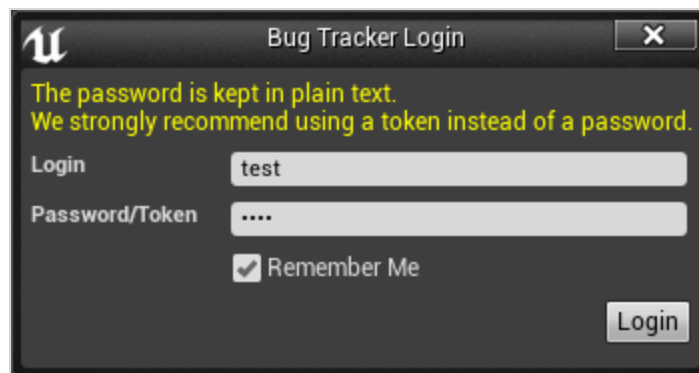

Message Log

In the Message Log tab, the Ultimate To-Do List section shows the same logs as the [Output panel](#). You can make the logs more detailed in the “Debug” section of the project settings.

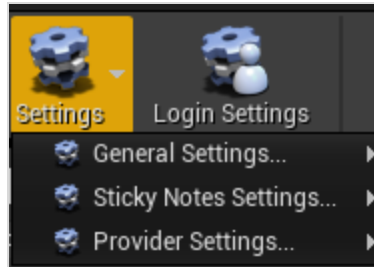

Login Dialog Box

This window can be different for each provider.

Project Settings

You can edit the Ultimate To-Do List settings in the Editor Settings tab, or directly in the main tool window. The settings have three sections.

Level Tasks

When you make a level task, the plugin automatically adds the level name, the location and the orientation to the task. On the Tasks List, a column shows this symbol for each task that has this information:

A task keeps its location information. Thus you can go very quickly to the level, at the location of the task. To do this, click this button on the toolbar of the Task Details panel:

Sticky Notes

The level viewport can show all the task markers of the level that is open. To enable this feature, select this button in the [Toolbar](#):

When you select a sticky note in the level viewport, the task opens in the Task Details panel. When you double-click a marker, the level viewport moves to the location of the sticky note.

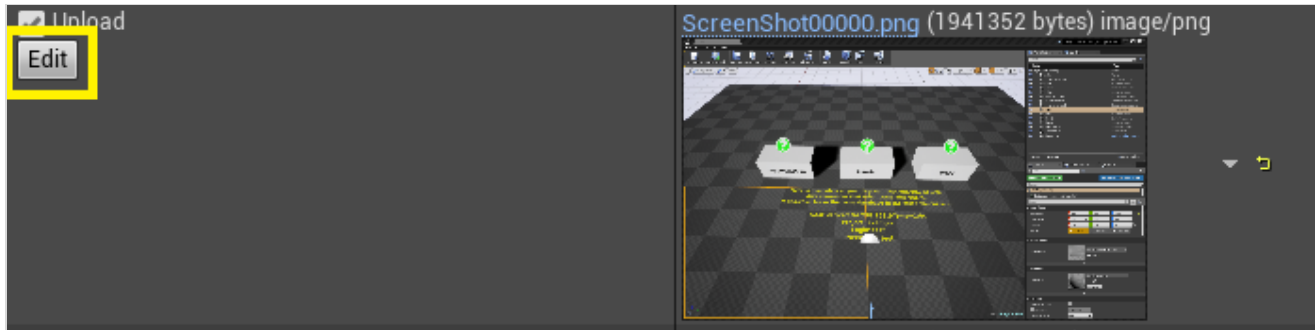

New level task

Example description for sticky
note

no assigned

Editing Screenshots

Before you submit a task, you can edit all its screenshots in an image editor that you select, for example Paint.

Use the **Upload** check box to select the files to attach.

Reporting Automation

To make the QA team more efficient, you can let the plugin do some of their repetitive work automatically.

Task Constructor

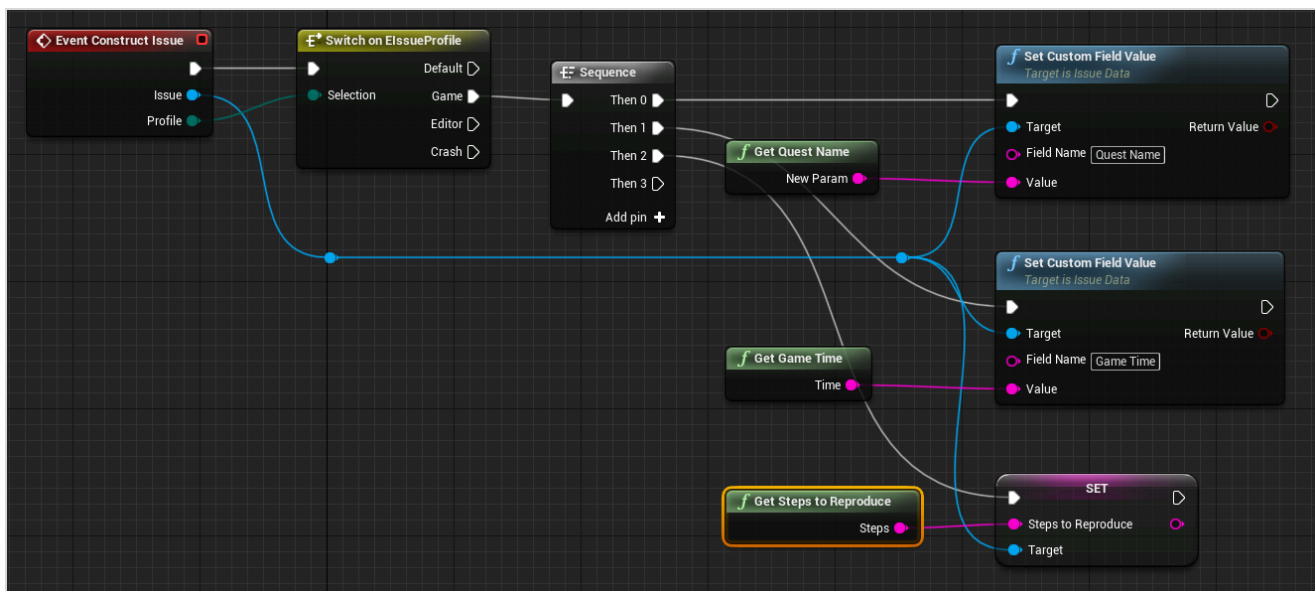

Task Constructor is a Blueprint class that can change all the parameters of a task. For example, you can add more information, such as the name of the current quest or the skills of the player character.

To make your own Task Constructor, do these steps:

1. Make a Blueprint that inherits from **TaskConstructor**.
2. In the Blueprint, override the **Construct Task** function.

The plugin calls **Construct Task** for each task immediately after you add it.

The example below is for the tasks that you add in the game. It adds this information to each of these tasks: the current level, the game time and some steps to reproduce.

To set your Task Constructor, select a TaskConstructor class in the combo box in [Project Settings](#).
